

BEULAH AKINDELE

Principal Fullstack Software Engineer | Lagos, Nigeria | akibeulah@gmail.com | +234 909 142 7926

PROFESSIONAL SUMMARY

Principal Software Engineer with 4+ years architecting security-critical fintech platforms serving 400+ financial institutions across Nigeria, Ghana, Ethiopia, Gambia, and Tanzania. Delivered measurable outcomes: 99.75% onboarding reduction, 450% performance acceleration, 96% reconfirmation queue reduction, 60% gateway improvement. Experienced in end-to-end architecture ownership, cross-functional delivery, and platform-wide engineering standards across distributed microservices ecosystems.

CORE COMPETENCIES

Languages: Java, C#, TypeScript, JavaScript, Python, Shell Scripting

Backend/Frontend: Spring Boot, .NET Core, Express.js, Django, Laravel | React.js, React Native, Next.js, Vue.js, Angular

Data & ORM: PostgreSQL, MySQL, MongoDB, DynamoDB, Oracle 19C, Elasticsearch, SQL Server, Hibernate, EF Core

Messaging & DevOps: RabbitMQ, Azure Service Bus, MQ | AWS, Azure, Docker, Kubernetes, Jenkins, Octopus, ArgoCD, Grafana

Practices: Microservices, Zero Trust Architecture, ISO 20022, TDD, System Design, NIBSS/NIP

WORK EXPERIENCE

Principal Fullstack Software Engineer

March 2025 – Present

Qore Technologies Limited

Lagos

- Designed and executed a platform-wide security hardening initiative across a channel platform serving 400+ microfinance banks and Tier 1/2 institutions in Nigeria, Ghana, Ethiopia, Gambia, and Tanzania: cryptographic transaction integrity verification, encrypted gateway credential storage, PII log sanitization, and a Zero Trust inter-service auth layer using short-lived tokens. Consolidated all NIBSS gateway traffic through a certificate-gated, dockerized middleware on a dedicated blackbox server, eliminating MITM, IP spoofing, and credential interception vectors.
- Architected the platform's first ISO 20022 integrations (NIBSS NPS and ISW PurePay) with event-driven asynchronous transfer architecture: service bus for message and acknowledgement handling, caching layer for name enquiry and TSQ, establishing the onboarding pattern for all future ISO 20022 gateways. Also onboarded CoralPay Fast Channel and two additional processors; upgraded two legacy integrations with zero downtime.
- Designed the Institution-Gateway Specific (IGS) fee framework enabling per-institution, per-gateway fee configurations with audit-traceable fee references; migrated bills payment infrastructure from SOAP/WCF to RESTful APIs with token-based authentication and dynamic biller amount validation; delivered an enterprise middleware exposing transfer and institution management capabilities via hybrid JWT and API Key authentication.
- Modernized the KYC verification service suite across five identity endpoints, decoupled billing into a dedicated .NET 8.0 worker service with retry and circuit breaker logic, and extended the suite with two new verification offerings, eliminating silent billing failures and improving service reliability.
- Delivered self-service institution profiling, cache-first data retrieval, and reconfirmation queue optimization: 96% queue depth reduction, 38% fewer failed transactions week-on-week, 99.9%+ uptime maintained.

Software Developer & Calypso Technical Consultant

February 2024 – February 2025

Seaico Technologies Limited

Lagos

- Designed and led development of the Seaico Retail Platform, a Calypso companion application on a 6-service microservices architecture (Java, Spring Boot, React.js, Oracle 19C, PostgreSQL) with a real-time Calypso data-sharing pipeline, abstracting trading complexity for bank staff. Owned architecture decisions, task assignment, and code review across a team of 4 developers.
- Designed and built TradeLink, a YAML-based configuration-driven middleware synchronizing trade data across Calypso, BMatch, and IntegralFX for Access Bank and Zenith Bank, achieving sub-second trade propagation latency. Scripting engine supported SFTP, FTP, REST, MQ, SMTP with dynamic field transformation across XML, JSON, and CSV. Delivered a JavaFX SSH-launchable monitoring client.
- Served as lead Calypso consultant on Fixed Income/FX deployments across Access Bank (NG, Ghana, Cameroon), Zenith Bank (NG, UK), and FCMB, owning DB provisioning, JVM configuration, and custom integration development. Automated Oracle 19C and 3-version Calypso environment startup via Bash, reducing launch time by 120%.

Machine Learning & Backend Engineer

February 2023 – January 2024

Get Step Limited

Lagos

- Owned posts and social graph domain of a Twitter/Amazon hybrid platform; built async metadata extraction pipeline feeding a TF-IDF recommendation engine (scikit-learn, NumPy) extended with a TensorFlow media analyser for image/video semantic descriptions via a fine-tuned pretrained model.
- Refactored Django recommendation service to return only IDs, delegating serialization to the C#/.NET API: 450% performance improvement. Two-phase caching (daily model rebuild, live inference at query time). Wallet microservice (Paystack, Providus): 30% throughput increase. Stored procedure rewrites: 35% query improvement.

Fullstack Software Engineer

October 2021 – January 2023

TBO Consulting Limited

Lagos

- Solely designed and delivered a Talent-as-a-Service platform (React.js, Node.js, Express.js, MySQL) replacing manual hiring coordination with a structured self-service recruitment pipeline tool.

PERSONAL PROJECTS

AI Documentation Platform (POC) | C#, .NET, OpenAI, Jenkins, Octopus, Bitbucket: Organisation-wide pipeline-triggered system that parses XML doc comments on every push across all org repositories, auto-generating a unified, version-aware documentation website per project. Next phase: RAG layer over the full documentation corpus for LLM-level planning and implementation assistance to engineers.

Multi-Tenant BaaS Platform | MongoDB, Express.js, React.js, Node.js, Redis, Paystack | Live, revenue-generating: Backend-as-a-Service supporting real estate, e-commerce, and blogging across tenant-isolated shared infrastructure with Redis-backed caching and a unified API.

EDUCATION

B.Eng. Electrical & Electronics Engineering

Covenant University
